FIRE RATED INSPECTION HATCH

The inspection hatch consists of two frames (1 fixed and 1 opening) made of aluminium profiles and completed with plasterboard.

The two frames of the inspection hatch consist of four aluminium profiles rigidly connected to each other by means of a special welding.
An intumescent seal is fitted around the edges of the sash and the fixed frame.
The door is equipped with two locking devices (cable + snap hook).

For safety reasons, these devices must always be hooked in before closing the door panel. Invisible spring catches allow the door to be opened and closed by simply pressing the door.

EI 60

A x B = 200 x 200 mm to 1500 x 1000 mm
C = 30 mm
D = 55 mm
Total thickness = 45 mm

EI 120

A x B = 200 x 200 mm to 1500 x 1000 mm
C = 50 mm
D = 55 mm
E = 30 mm
Z = 80 mm

A = Opening frame height
B = Opening frame width
A x B = Hatch cross-section and free passage
C = Frame thickness
D = Frame width
E = Thickness of the counter frame
Z = Total thickness of the hatch

Installations

Glue + fiber reinforced gypsum

Geostaff vertical inspection hatches must be installed vertically in order to access the technical ducts (PV n° 12-A-119 Rév.1 + Extensions 15/2 and 15/3).

Applications

- Installation in the protection of technical ducts
- Our fire doors can be mounted on our GEOTEC® and GEOFLAM® products

Available locks

EI 60

Square key lock
Cylinder lock
Deadbolt lock

EI 120

Cylinder lock

Transport and storage

Transport and store on a flat, protected surface (out of water).

Classification and tests

- ✓ The hatches are certified according to the fire resistance test standards:
EN 1634-1
- ✓ Any direction of fire
- ✓ EFACTIS classification document : 12-A-119 rev.1 + Ext. 15/2 (for **EI 60** fire rated inspection hatch)
- ✓ EFACTIS classification document : 12-A-119 rev.1 + Ext. 15/3 (for **EI 120** fire rated inspection hatch)
